PHARMACY ALLERGY TREATMENT

Say Goodbye to Your Tree, Pollen, Pet or Dust Allergy

Want to know more?

Speak to our pharmacy team today

If you're tired of suffering from airborne irritants like hay fever, pet or dust allergies, there's a long-term solution available at your local pharmacy

What is SLIT?

Sublingual Immunotherapy (SLIT) is a daily tablet that treats the root cause of your allergies - not just the symptoms.

How does it work?

- A tiny microdose of the allergen slowly builds lasting tolerance to things like pollen, pet dander and dust
- Taken under the tongue at home
- Safe, effective, and suitable for adults and children aged 5+

How long does it take?

While everyone is different, a typical relief timeframe could look like:

- First improvements: Most people notice a difference within 3–6 months.
- Significant results: See major changes within 1 year.
- Permanent relief: Complete the full 3-year course of daily treatment and you could enjoy a lifetime of symptom relief, even after you stop.

Three years, for a lifetime of benefit.

Why choose SLIT?

- Reduces symptoms like sneezing, itchy eyes, runny nose
- Reduces your need for antihistamines, nasal sprays, or eye drops
- Can prevent new allergies from developing and treat multiple allergies at once
- Can reduce asthma risk if started early
- Clinically proven and used across Europe and USA

Who is it for?

SLIT may be right for you if:

- You experience recurring allergy symptoms
- You regularly buy allergy meds but still suffer
- You want a permanent solution, not a temporary fix

Is it safe?

Yes. Most people only experience mild tingling or itching in the mouth for the first week or two - a sign it's working. Serious reactions are extremely rare.

What does it cost?

Treatment starts from **£99/month and a course lasts 3 years** - invest in your health and get rid of your allergies, permanently
